NIKUNJ RATHOD

Software Developer

PROFESSIONAL SUMMARY

Software Developer with 5 years of experience specializing in API frameworks, enhancing software quality through collaboration. Proficient in web technologies, with a proven track record in streamlining application development and managing complex integrations. Continuously advancing technical skills to meet evolving business needs and deliver innovative solutions.

EMPLOYMENT HISTORY

SOFTWARE DEVELOPER **Jan 2025 - Present**

Vinvox ***Moncton, NB, Canada***

- Designed and implemented a microservices architecture in .Net Core to aggregate and process comprehensive vehicle data across multiple automotive manufacturers for fraud detection and diagnostics.
- Upgraded a Kotlin-based Android application specialized in detecting odometer tampering and vehicle fraud; successfully launched across local dealerships ahead of a planned global rollout.
- Engineered and upgraded a Python (PyQt) Windows application to interface with Maxisys diagnostic hardware, decode vehicle data, and enable direct-to-vehicle communication for advanced testing.
- Integrated third-party APIs into a Python (Flask) backend, enriching the customer-facing web platform with real-time vehicle insights, scan histories, and diagnostic reports in Vue.js.
- Collaborated in an Agile environment to architect CI/CD pipelines using Docker and Azure DevOps, streamlining code deployments and reducing release cycles.
- Key Technologies: .Net Core C#, Kotlin (Android), Python, Vue.js, SQL, JavaScript, Agile, JIRA.

SOFTWARE DEVELOPER **Mar 2021 - Jan 2025**

Ditech Testing ***Scoudouc, NB, Canada***

- Led integration of ERP systems and data for improved production, finance, sales, and logistics using multiple microservices.
- Integrated multiple APIs, including Jira API, Fuel API, and Samsara Logistics API into our system to display valuable information on the website.
- Reduced delays by creating service brokers that send broadcast messages and emails on database updates using real-time service.
- Developed comprehensive test plans and test cases for new features and releases, and collaborated with development teams to debug issues and enhance overall software quality.
- Collaborated with team to deploy code changes using CI/CD pipelines and utilized containerization tools like Docker and Kubernetes in the Cloud.
- Integrated data from Galiso (Tank pressure measuring machine) hardware systems and VTScada (Production Tanks line).
- Enhanced software quality through active collaboration with management, employees, and developers.
- Key Technologies: C#, Python, SQL, JavaScript, React, jQuery, Agile, JIRA.

EDUCATION

B.TECH (IT) — **Sep 2015 - Apr 2019**
Charotar University of Science and Technology — *Changa, Gujarat, INDIA*

IT: SOFTWARE DEVELOPMENT — **Sep 2019 - Jun 2021**
New Brunswick Community College — *Moncton, NB, Canada*

SKILLS

C#, VB.net, JavaScript, Java, C++, ASP.Net Core, Blazor, React, SignalR, xUnit, K6, Opentelemtery, Grafana, Zepkin, Seq, SQL Server, MySQL, Linux, HTML5, Syncfusion, CSS, jQuery, Bootstrap, Selenium, REST, SOAP, Azure, Bitbucket, GitHub, Git, Docker, Kubernetes, Terraform, Azure Devops, Ansible, JIRA, Postman, Unit Testing, Agile/Scrum, Visual Studio, MVC, MVVM, TDD, Entity Framework, RabbitMq, Grpc.

PROJECTS

API and Website with Devops on AZURE

(https://github.com/nikunj3011/GameLibrary-netCore)

Develop a microservice API and a website using software engineering best practices. Deploy the code to GitHub and Azure DevOps platforms. Build the application using Kubernetes and Docker containers. Provision the server on Azure cloud using Terraform Configure the software using Ansible Monitor the application using OpenTelemetry, Grafana, Zepkin and Seq. Basic Bearer Authentication. Test the functionality and quality of the code using xUnit framework. Evaluate the performance and scalability of the application using k6 tool. Moreover, used service broker for real-time data updates. RabbitMQ for ASYNCHRONOUS MESSAGING and GRPC for SYNCHRONOUS MESSAGING.

Wuthering Waves (Game) React Website

(https://wutheringwavesguide.com/) (https:/github.com/nikunj3011/Wuthering.Waves.React)

Wuthering Waves professional game guide website using React, published via GitHub Pages with JSON data storage. Cloudflare was used for security, monitoring, and caching optimization.

ZZZ Guide (Google Play)

(ZZZ Guide - Apps on Google Play) (https://github.com/nikunj3011/ZZZ-Guide-Android)

Developed ZZZ guide app (android studio and kotlin) and published it on google play. Best clean MVVM architecture practices for Android application. Update data from api to Room local database. Android animations.

CERTIFICATIONS

- Clean Architecture
- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)
- Azure Devops
- IBM Data Science Specialization
- Machine Learning (Andrew.Ng)
